Hirdaramani Group to launch another green factory

The Hirdaramani Group will soon be adding another energy-efficient factory to its portfolio. The new factory, called the "Green Factory," will be equipped with state-of-the-art technology to reduce its carbon footprint. The factory will be powered by solar panels and will generate its own electricity, reducing its dependence on the grid. The project is estimated to cost around $10 million and is expected to create 500 jobs. The factory is located in the heart of Colombo, and its construction is expected to be completed by the end of the year. The new factory is part of the company's ongoing commitment to sustainability and environmental responsibility. The company has already invested in several green initiatives, including solar power plants and renewable energy projects. The "Green Factory" is expected to be a model for sustainable development in the region and will set a new standard for energy-efficient manufacturing.
