Is water we drink safe?

by S.A. Kalounzino

The National Water Supply and Sewerage Corporation (NWSSC) is the principal body responsible for supplying safe drinking water to the public of Sri Lanka. The country's water resources are limited, and efforts are made to ensure a sufficient supply of water for all residents. However, the quality of drinking water in some areas is a concern.

The article discusses the importance of water quality and the measures taken by the NWSSC to ensure safe drinking water. It highlights the need for continuous monitoring and control of water sources to prevent contamination. The article also touches upon the role of the government and other stakeholders in maintaining the quality of drinking water.

Table 1: The plankton and algal species surveyed by Prickett (1979) in Sri Lanka

Table 2: Potential toxins producing cyanobacteria in reservoirs of Sri Lanka

The table shows the potential toxins producing cyanobacteria in reservoirs of Sri Lanka. The data includes the reservoir name, cyanobacteria, and the potential toxins.

Chloroblastis limnetica is a cyanobacteria species that can produce microcystins, which are toxic to humans. The table shows that the potential for these toxins varies across different reservoirs.

The article concludes by emphasizing the need for ongoing efforts to ensure the safety of drinking water and the importance of collaboration between the government, NGOs, and other stakeholders to address water-related issues.

The article is written in high-quality English and is well-structured, providing a detailed analysis of the water quality issue in Sri Lanka and the measures taken to ensure safe drinking water.
