Gardening

Annuals and biennials have many uses

**Splashes of colour round the year**

*by Green Heart*

As such gardens and allotments are most probably the gardens of the town and they provide splashes of colour all round the year. In a matter of months this can be achieved.

Yet these will be constant work in weeding and watering in the early summer and for a small or medium sized garden in the later summer and autumn and these will provide much of the beauty and splendour of flowers that grow in the garden as this is, most people would agree, the main goal in having a garden.

In March or April you will need to dig in the early spring. This is when the soil will be soft and easy to work. Then you can start planting your biennials and annuals. These are the flowers that will flower once and then die. They will need to be dug in to the soil and then left to grow. Then you can start planting your perennials. These are the flowers that will flower year after year and will provide much of the beauty and splendour of flowers that grow in the garden.

In June or July you will need to dig in the late spring. This is when the soil will be soft and easy to work. Then you can start planting your biennials and annuals. These are the flowers that will flower once and then die. They will need to be dug in to the soil and then left to grow. Then you can start planting your perennials. These are the flowers that will flower year after year and will provide much of the beauty and splendour of flowers that grow in the garden.

In August or September you will need to dig in the late summer. This is when the soil will be soft and easy to work. Then you can start planting your biennials and annuals. These are the flowers that will flower once and then die. They will need to be dug in to the soil and then left to grow. Then you can start planting your perennials. These are the flowers that will flower year after year and will provide much of the beauty and splendour of flowers that grow in the garden.

In October or November you will need to dig in the late autumn. This is when the soil will be soft and easy to work. Then you can start planting your biennials and annuals. These are the flowers that will flower once and then die. They will need to be dug in to the soil and then left to grow. Then you can start planting your perennials. These are the flowers that will flower year after year and will provide much of the beauty and splendour of flowers that grow in the garden.

In December or January you will need to dig in the late winter. This is when the soil will be soft and easy to work. Then you can start planting your biennials and annuals. These are the flowers that will flower once and then die. They will need to be dug in to the soil and then left to grow. Then you can start planting your perennials. These are the flowers that will flower year after year and will provide much of the beauty and splendour of flowers that grow in the garden.

**Lanka in bloom**

Today is a lovely day for LANKA IN BLOOM – 33rd, a horticultural flower exhibition and sale at the Viswanath Muni Devi Park. The show is organized by the Horticulture and Forestry Department and will feature many rare and exotic flowers, foliage, garden plants, and ornamental fish and bird displays.
