Prevention is better than cure

Dr. Lottita Samsonwicen

Prevention is better than cure. The recent pandemic of swine influenza in the world and the world pandemic will in advance to prevent the possible threat to our country. Since influenza (H1N1) is one of the epidemics reported in USA and Mexico, Canada, Israel since the late 1910s, will have a greater possibility of attacking the whole world due to the facility of travel and trade across the world. It is also responsible to educate and provide information to guide and help the population to prevent swine influenza which affects our people (beef and animal) and human population to be able to prevent swine influenza.

Influenza in pigs and swine is common, especially during winter seasons, which becomes swine influenza. Swine influenza is shed in the environment. Signs of this disease in pigs are similar to what is seen in humans. Swine influenza has been transmitted to humans in the USA and Canada. This is the reason for the need to prevent the spread of the swine influenza in pigs and Swine influenza in humans. There is no evidence that humans can get infected by the swine influenza A (H1N1) virus. The swine influenza A (H1N1) type of virus is not known to be deadly to humans. The swine influenza A (H1N1) virus has been classified as a type of virus that has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus is not known to be deadly to humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans. The swine influenza A (H1N1) virus has not been identified in humans.
